

Universal Human Values – II (HS201)

Module 2: Harmony in the Human Being

Question Sheet — Prepared from Teachers' Manual (Lectures 7–12) & Assignment 2

Note on syllabus: As before, no official syllabus file was provided, so this sheet is built directly from the uploaded Module 2 document (Module-2_UHV-II_notes.pdf — Lectures 7 to 12, covering Self & Body, Harmony in the Self, and Harmony of Self with the Body) and Assignment 2, so that every topic taught in these materials is covered. Section A carries 2 marks per question (short answer) and Section B carries 7 marks per question (long/descriptive answer).

SECTION A — Short Answer Questions (2 Marks Each)

Self & Body as co-existence

Q1. What is meant by 'human being is the co-existence of the Self and the Body'?

Answer:

It means a human being is made up of two distinct realities existing together: the Self (the 'I' — consciousness that thinks, desires and feels) and the Body (the physical, material instrument). The two are different in nature but function together as one human being.

Needs: Self vs Body

Q2. Differentiate between the need of the Self and the need of the Body.

Answer:

The need of the Self is happiness (e.g., the feeling of respect), which is continuous and qualitative in nature. The need of the Body is physical facility (e.g., food), which is temporary and quantitative in nature — required in a limited quantity at a given time.

Fulfilment of needs

Q3. How are the needs of the Self and the Body fulfilled?

Answer:

The needs of the Body are fulfilled by physio-chemical things (food, water, clothes, shelter, etc.). The needs of the Self are fulfilled by right understanding and right feeling, since they are needs in terms of feeling, not physical quantity.

Activities of Self vs Body

Q4. What are the activities of the Self and the Body?

Answer:

The activities of the Self are desire, thought and expectation, which are continuous. The activities of the Body, such as eating and walking, are physical and temporary — they happen for a limited time and then stop.

Response of Self vs Body

Q5. Differentiate between the response of the Self and the response of the Body.

Answer:

The response of the Body is based only on recognising and fulfilling, and is definite. The response of the Self is based on knowing, assuming, recognising and fulfilling; since it depends on assuming, it can be indefinite unless the assuming is based on knowing.

Q6. Why is the Self called the domain of consciousness and the Body the domain of material?

Answer:

The Self is characterised by the activities of knowing, assuming, recognising and fulfilling, which are activities of consciousness. The Body only recognises and fulfils and is a physio-chemical, material entity — it cannot think, know or feel on its own.

Knowing vs assuming without knowing

Q7. What happens when 'assuming' is not based on 'knowing'?

Answer:

When assumptions are made without knowing (i.e., preconditioning), the assumptions keep changing, leading to indefinite conduct, dependence and enslavement. When assuming is based on knowing (through self-verification on natural acceptance), assumptions become definite, and conduct becomes definite and self-organised.

Gross misunderstanding

Q8. What is the 'gross misunderstanding' regarding the human being?

Answer:

It is the mistaken assumption that the human being is only the Body, and that all needs — including the feeling-based needs of the Self, like respect — can be fulfilled through physical facility. This creates the illusion that physical facility required is unlimited.

Deprivation loop

Q9. Explain the 'loop' of deprivation created by the gross misunderstanding.

Answer:

Since the need for feelings like respect is continuous but is wrongly pursued through physical facility, no amount of physical facility ever feels sufficient. This creates a continuous feeling of deprivation ('I don't have enough'), driving further effort for physical facility — an endless, unsatisfying loop.

Body as instrument

Q10. Why is the Body considered an instrument of the Self?

Answer:

The Self uses the Body to act in the world — giving it instructions and reading sensations from it, all in the form of information exchange, not material transaction. The Body is thus a tool or equipment used by the Self to fulfil its programme for continuous happiness.

Self as Seer-Doer-Enjoyer

Q11. Explain the Self as the 'Seer, Doer, Enjoyer'.

Answer:

The Self is the Seer because it sees and understands reality; the Doer because it decides whether to act; and the Enjoyer (Experiencer) because it is the Self that actually experiences happiness or unhappiness. The Body, in contrast, is merely a physio-chemical instrument.

Programme of the Self

Q12. What proportion of the Self's programme is related to physical facility?

Answer:

Production, protection and right utilisation of physical facility form only a part — roughly less than one-fourth — of the Self's complete programme, which is mainly about understanding and living in harmony at all four levels of being.

Imagination defined

Q13. What is 'imagination' according to Universal Human Values?

Answer:

Imagination is the combined, continuous activity of desire (imaging), thought (analysing-comparing) and expectation (selecting-tasting) in the Self. It is always going on, whether we are consciously aware of it or not, and is also referred to as 'what I am'.

Sources of imagination

Q14. Name the three possible sources of imagination.

Answer:

The three sources are: (1) Preconditioning — beliefs and norms assumed without knowing; (2) Sensation — information received through the five sense organs; and (3) Natural Acceptance — the inner voice or conscience.

Harmony in the Self

Q15. When is a person said to be in a state of harmony/happiness within the Self?

Answer:

A person is in harmony (happiness) within when their imagination — i.e., desire, thought and expectation — is in line with their natural acceptance. When imagination contradicts natural acceptance, the person experiences unhappiness within.

Sanskar

Q16. What is meant by 'Sanskar'? How does it get updated?

Answer:

Sanskar is the accumulated state of a person's acceptances, built from all past desires, thoughts and expectations, along with acceptances born of right understanding. It updates continuously: $\text{Sanskar}(t+1) = \text{Sanskar}(t) + \text{Environment}(t) + \text{Self-exploration}(t)$, so self-exploration can transform it.

Body as self-organised system

Q17. In what sense is the Body a 'self-organised system'?

Answer:

The Body's many organs and parts (eyes, brain, digestive system, cells, etc.) function in harmony with each other automatically, without the Self needing to consciously coordinate them — each part naturally co-exists and synchronises with every other part.

Self-regulation defined

Q18. Define self-regulation.

Answer:

Self-regulation is the feeling of responsibility within the Self towards the Body — for nurturing, protecting and rightly utilising the Body. It is a feeling that arises in the Self and results naturally in the health of the Body.

Indicators of health

Q19. What are the two indicators of a healthy Body?

Answer:

A Body is healthy when: (1) it is able to perform according to the instructions of the Self, and (2) its different parts function in harmony amongst each other, i.e., they are in order.

Psycho-somatic disorders

Q20. What are psycho-somatic disorders, and what causes them?

Answer:

Psycho-somatic disorders are Body ailments ('somatic') that originate from disharmony in the Self ('psycho'). They are common today because people wrongly assume 'I am the Body' and chase happiness through sensation, causing disharmony within that manifests as illness in the Body.

Components of health programme

Q21. Name any four components of the programme for self-regulation and health.

Answer:

Any four of: (1) Intake — air, water, food, sunlight; (2) Routine — sleep, waking, cleaning schedule; (3) Physical Labour; (4) Exercise; (5) Balancing internal/external organs; (6) Balancing breathing; (7) Medicine; (8) Treatment.

Prosperity revisited

Q22. How does understanding the harmony between Self and Body help us understand prosperity?

Answer:

Since physical facility is only required in a limited quantity for nurturing, protecting and rightly utilising the Body, seeing this clearly shows that our physical needs are, in fact, limited — making prosperity (having more than what is required) genuinely achievable.

SECTION B — Long/Descriptive Answer Questions (7 Marks Each)

Self & Body: needs, activity, response

Q1. Explain human being as the co-existence of the Self and the Body, bringing out the differences in their needs, activities and responses.

Answer:

The proposal put forward in Universal Human Values is that a human being is the co-existence of two distinct realities: the Self (the 'I', the domain of consciousness) and the Body (the physical instrument, the domain of material). These two can be distinguished clearly across four dimensions.

Need: The need of the Self is happiness — for example, the feeling of respect — while the need of the Body is physical facility, such as food. The Self's need is continuous in time and qualitative in nature (a feeling, not a measurable quantity), whereas the Body's need is temporary in time and quantitative (a definite, limited amount).

Fulfilment: Needs of the Body are fulfilled by physio-chemical things, while needs of the Self are fulfilled by right understanding and right feeling.

Activity: The Self is engaged in continuous activities of desire, thought and expectation, while the Body's activities — eating, walking, and so on — are temporary.

Response: The response of the Body is based on recognising and fulfilling, and is definite. The response of the Self additionally involves knowing and assuming, and is therefore not automatically definite — it depends on whether our assuming is grounded in knowing. When assumptions are not based on knowing (i.e., mere preconditioning), our conduct keeps changing and becomes indefinite, leading to dependence; when assumptions are based on knowing through self-verification, conduct becomes definite and self-organised. This shows that to understand the human being correctly, both the domain of consciousness (Self) and the domain of material (Body) must be understood and fulfilled separately, since neither can substitute for the other.

Gross misunderstanding

Q2. Explain the 'gross misunderstanding' of assuming the human being to be only the Body, and its consequences.

Answer:

The gross misunderstanding is the widespread assumption that a human being is only the Body, and that therefore all human needs — including feeling-based needs of the Self such as respect, love and trust — can be fulfilled through physical facility alone. Under this assumption, people believe that accumulating more clothes, houses, cars and other possessions will 'fetch' respect and other feelings.

However, the need for feelings is continuous, while physical facility can only be quantitative and limited. When we try to satisfy a continuous, qualitative need through a quantitative means, no amount ever feels like enough. This creates a persistent feeling of deprivation — 'I don't have enough' — which drives ever more effort towards acquiring physical facility, without ever resolving the underlying need. This is the deprivation loop: effort for physical facility leads to more accumulation, which still leaves a feeling of deprivation, prompting still more effort, endlessly.

The wider consequences of this misunderstanding are visible throughout society: exploitation of natural

resources to produce unlimited physical facility, exploitation of other human beings in the process of production and competition for limited resources, and psycho-somatic illness at the individual level. The only way out is to correctly understand the human being as the co-existence of Self and Body, recognising that the Self is a conscious entity with feeling-based needs fulfilled by right understanding and right feeling, while the Body is a material entity with limited, quantitative needs.

Body as instrument, Self as Seer-Doer-Enjoyer

Q3. Explain why the Body is considered an instrument of the Self, and describe the Self as the Seer, Doer and Enjoyer.

Answer:

The Self and the Body co-exist, but they interact only through an exchange of information, not material transaction: the Self sends instructions to the Body, and the Body sends sensations back to the Self, both of which the Self processes as and when it chooses. In this relationship, the Body functions purely as an instrument or equipment that the Self uses to fulfil its programme for continuous happiness.

The Self's will is to live with continuous happiness, and its full programme is to understand harmony and live in harmony at all four levels of being — individual, family, society and nature/existence. Within this programme, the Body needs to be nurtured, protected and rightly utilised, which requires physical facility; but this part of the programme is estimated to be less than one-fourth of the Self's complete programme. The rest is about relationships, understanding and participation in the larger order.

Because of this central role, the Self is described as the Seer, Doer and Enjoyer. It is the Seer because it is the Self that sees and understands reality. It is the Doer because it is the Self that takes decisions — whether to act or not to act. And it is the Enjoyer (or Experiencer) because it is the Self alone that actually experiences happiness and unhappiness; the Body, being a mere physio-chemical entity, cannot experience anything by itself. This establishes that the Self is central to human existence, while the Body, though essential, plays only the role of a useful tool in service of the Self's programme.

Activities of Self & harmony

Q4. What are the activities of the Self? Explain how harmony in the Self can be achieved.

Answer:

The Self has three continuous powers/activities: Desire, which is the activity of imaging — forming a picture of what one wants; Thought, which is the activity of analysing and comparing various possibilities to fulfil the desire; and Expectation, which is the activity of selecting and tasting among the analysed possibilities. Together, these three continuous activities constitute what is called imagination, and this imagination is always going on within us, whether or not we are consciously aware of it. Imagination is also referred to as 'what I am,' in contrast to natural acceptance, which is 'what I really want to be.'

Our imagination can be motivated from three possible sources: preconditioning (unverified beliefs and norms absorbed from family or society), sensation (input from the five sense organs), and natural acceptance (our inner voice or conscience). When imagination is driven by preconditioning or sensation, it may or may not align with our natural acceptance, so we may be happy or unhappy within, and our happiness becomes dependent on — or 'enslaved' by — these external sources. When imagination is guided by natural acceptance itself, it is sure to be in harmony, and we experience happiness within; we become 'self-organised.'

To achieve harmony in the Self, therefore, we must undertake self-exploration: we need to (1) know our natural acceptance, (2) become aware of our imagination, (3) identify the actual source motivating that imagination, and (4) work to bring our imagination fully in line with our natural acceptance. This process is continuous, since our 'sanskar' — the accumulated state of our acceptances — is updated at every moment based on our previous sanskar, our environment, and the self-exploration we do; hence self-exploration is the key tool for transforming our sanskar and achieving lasting harmony in the Self.

Body self-organised, self-regulation, health

Q5. Explain the Body as a self-organised system, and describe the meaning of self-regulation and its relationship with health.

Answer:

The Body is described as a wonderful self-organised system: its many parts — the eyes, brain, digestive system, and every organ and cell — function in harmony with each other automatically, without any conscious effort from us to coordinate or synchronise them.

The Self's responsibility towards this instrument is expressed as self-regulation — the feeling of responsibility within the Self for nurturing, protecting and rightly utilising the Body. Nurturing means supplying appropriate inputs such as air, water, food and sunlight; protection means safeguarding the Body's continuity from unfavourable conditions; and right utilisation means using the Body for the purposes of the Self, i.e., for fulfilling the human aspiration. This feeling of self-regulation in the Self is primary, and health of the Body is its natural consequence — it is not something separately chased, but a result of the Self properly discharging this responsibility.

A healthy Body can be recognised by two indicators: it performs according to the instructions of the Self, and its different parts remain in harmony (in order) among themselves. When the Self has this feeling of self-regulation and the Body is healthy, we say there is harmony of the Self with the Body.

The wrong assumption that 'I am the Body' undermines this harmony, because it leads people to chase happiness through favourable bodily sensation and excessive consumption of physical facility. This is one major reason for the rise of psycho-somatic disorders — illnesses in the Body ('somatic') that originate from disharmony in the Self ('psycho'). The way ahead is to correctly understand the human being as the co-existence of Self and Body, and to cultivate the feeling of self-regulation in the Self as the basis for lasting health in the Body.

Programme for self-regulation and health

Q6. Describe the detailed programme for ensuring self-regulation and health of the Body.

Answer:

The programme to ensure self-regulation and health covers the three responsibilities of nurturing, protecting, and rightly utilising the Body.

Nurturing the Body includes: (1a) Intake — the air, water, sunlight and food the Body takes in; (1b) Routine — a regular schedule for sleeping, waking, cleaning and eating; (2a) Physical Labour — adequate work on the rest of nature, which provides bodily movement and also produces physical facility; (2b) Exercise — for those unable to labour, to maintain the Body's upkeep; (3a) Balancing internal and external organs through appropriate postures and movements; and (3b) Balancing breathing through appropriate breathing exercises. If, despite following these, disharmony persists in

the Body, we may additionally need (4a) Medicine, to address lifestyle disorders and illnesses, and, if the Body cannot recover on its own, (4b) Treatment.

Protecting the Body means providing a conducive physical environment — clothing, shelter, and so on — to safeguard the Body's continuity.

Right utilisation of the Body means using it in the actual process of fulfilling the needs of the Self — i.e., in the work required to understand and live in harmony at all levels — including working with the rest of nature to produce the physical facility the Body requires.

Crucially, when we examine each of these purposes closely, we find that the physical facility required for nurturing, protecting and rightly utilising the Body is required only in a limited quantity. Seeing this clearly allows us to correctly understand and achieve the meaning of prosperity: our true participation (value) regarding our own Body is to ensure the feeling of self-regulation in the Self, to fulfil the nurturing, protection and right utilisation of the Body, and to ensure the availability of more than the required physical facility for these limited, definite purposes.

Reference: Original Assignment 2 Questions Covered Above

The ten assignment questions provided by you are all addressed within Section A/B above. For quick cross-reference:

Assignment 2 Question	Covered in
Q1. Human being as co-existence of Self & Body	Section A – Q1; Section B – Q1
Q2. Differentiate needs of Self & Body	Section A – Q2, Q3; Section B – Q1
Q3. Activities of the Self — name & explain	Section A – Q4, Q13; Section B – Q4
Q4. Gross misunderstanding of human being as only Body	Section A – Q8, Q9; Section B – Q2
Q5. Why Body is an instrument of the Self	Section A – Q10; Section B – Q3
Q6. Self as 'Seer, Doer, Enjoyer'	Section A – Q11; Section B – Q3
Q7. Imagination & its three sources	Section A – Q13, Q14; Section B – Q4
Q8. How harmony in the Self can be achieved	Section A – Q15, Q16; Section B – Q4
Q9. Define self-regulation; contribution to health	Section A – Q18, Q19; Section B – Q5
Q10. Four components of self-regulation/health programme	Section A – Q21; Section B – Q6

Prepared for exam/assignment practice. Since no official syllabus file was provided, coverage is based fully on the uploaded Module 2 teacher's manual (Lectures 7–12) and Assignment 2. If your teacher shares the syllabus later, this sheet can be quickly cross-checked and extended.
